OBJECTIVE

As a computer hobbyist I started programming in high school and got good at it by working part time as a developer in my university years. I mixed my studies in industrial engineering with my work experience in IT and became a project manager in this field. I'm currently using common project management tools, like WBS, in special computer development techniques like Agile and Scrum which is not a common practice but seems really successful in managing remaining work. My ultimate objective is to find the best project management method for my team.

EXPERIENCE

From 10/23/2014 - To Present
Ertebat Gostaran Hezareh

IT Project Manager

- > I returned to my old company in a new position
- > My job is to manage a small team of developers under supervision of company's CTO for better results and more accurate reports.
